

27 February 1961

Dear Doc,

25X1A

25X1A

Enclosed herewith are two reports on our "glass breaking" program, which was recommended by our consultant, [redacted]. The program demonstrates that controlled grinding and polishing, in accordance with [redacted] recommendation, increases the strength of glass by about 50%. This improved sequence of grinding and polishing will be employed on the system's windows, which is the only place where glazing strength is critical.
